

CLAIMS

We claim:

1. An intermediate vertical member join comprising a top side, a first side and a second side cooperating to form a channel therebetween, said channel sized to accept a horizontal scaffold member in said channel, said first side having an attachment means for attaching to a horizontal scaffold member, said attachment means adapted to join a horizontal scaffold member at an angle to a horizontal scaffold member positioned in said channel; and a vertical stub positioned on said top side directed away from said channel, said vertical stub adapted to connect to a vertical scaffold member.

2. The intermediate vertical scaffold join of claim 1 wherein said attachment means is a clamp.

3. The intermediate vertical scaffold join of claim 1 wherein said second side further has an opening therein adapted to accommodate a horizontal scaffold member, said opening aligned to accept a horizontal scaffold member positioned in said attachment means.
